an **Alltech®** company

18% R2D2
(ROBOT PELLET)

FOR DAIRY COWS
USING AN AUTOMATED
FEEDING SYSTEM

**Treat them to a pellet that
will keep them coming back!**

Masterfeeds R2D2 Robot pellets are designed to enhance the drivability of cows to robot milkers. With highly palatable ingredients, a unique flavor profile and excellent pellet quality characteristics, using R2D2 will mean shorter fetch lists with more opportunities to harvest milk when you want to!

Masterfeeds – the experts in robot milking:

- *Experience: we've been feeding robots in Canada since 2000*
- *Selection: R2D2 available in 16%, 18% and 20% protein formulations, and now available in a 30% option to be mixed with on-farm grains*
- *Quality: Meet your production goals with a dedicated staff, quality ingredients, and HAACP approved manufacturing facilities*

FOR WHAT
GOES INTO
ALL YOU DO.™

18% R2D2 (ROBOT PELLETS)

FOR DAIRY COWS USING AN AUTOMATED FEEDING SYSTEM

18% R2D2 Robot Pellet is a highly palatable feed that is intended to be fed in dairy cows through an automated feeding system. Feed in conjunction with a balanced total mixed ration, 18% R2D2 Robot Pellet provides supplemental energy and protein to encourage maximum visits to automated milking/feeding stations.

DIRECTIONS FOR USE:

Topdress R2D2 pellets at a rate sufficient to deliver 1.0 to 2.0 kgs per visit.

Feeding speed should be adjusted in conjunction with average milking speed, but should fall into the range of 300 to 400 gms per minute.

Successful feeding in robotic systems is entirely dependent on having a properly balanced bunk recipe.

Follow an on-farm feeding program provided by your Masterfeeds Account Manager.

Energy and fibre from a blend of sources. Cows stay healthy by controlling the level of starch in their diet and using more digestible fibre sources as fermentable sources of energy. This will keep her milking with good feet and components, while helping her to breed back in shorter days.

Healthy cows. Topdressing in a computer feeder means slug-feeding. Slug-feeding increases the risk of acidosis. R2D2 pellet is formulated to reduce that risk while maintaining animal performance!

FEATURES & BENEFITS:

Hard pellet. Designed for optimal flow and reduced fines in automated feeding systems.

High quality, palatable ingredients with a unique blend of flavors. Specifically formulated for optimum intake, while avoiding issues associated with acidosis. Keeps them happy for the entire milking which means fewer kicked-off milkers!

All natural protein with a specific balance of protein fractions and amino acids. Providing quality, all-vegetable energy and protein sources ensures palatability and performance.
